*Muwaffaq & Eldar*

## WHAT IS IT?

---

- Food Delivery is a mobile app where you can order food from canteen remotely

# SYSTEM

---

➤ Food delivery contain 2 parts

➤ Client part

➤ Admin part

# ADMIN PART

---

- Admin Use cases
- Checking order status
- Upload New Menu
- Current menu meal choosing
- Client feedback Processing
- Accept / Reject Orders

# CLIENT PART

---

- Use Case
- View Food list
- View Food details
- Add Food to cart
- Add Address
- Check out process

## IMPORTANT DECISION

---

➤ **Prioritize** the Use Cases and focus  
on Just the **Client Part**

# MISSING USE CASES

---

➤ We had to add the following use cases

➤ Login

➤ Signup

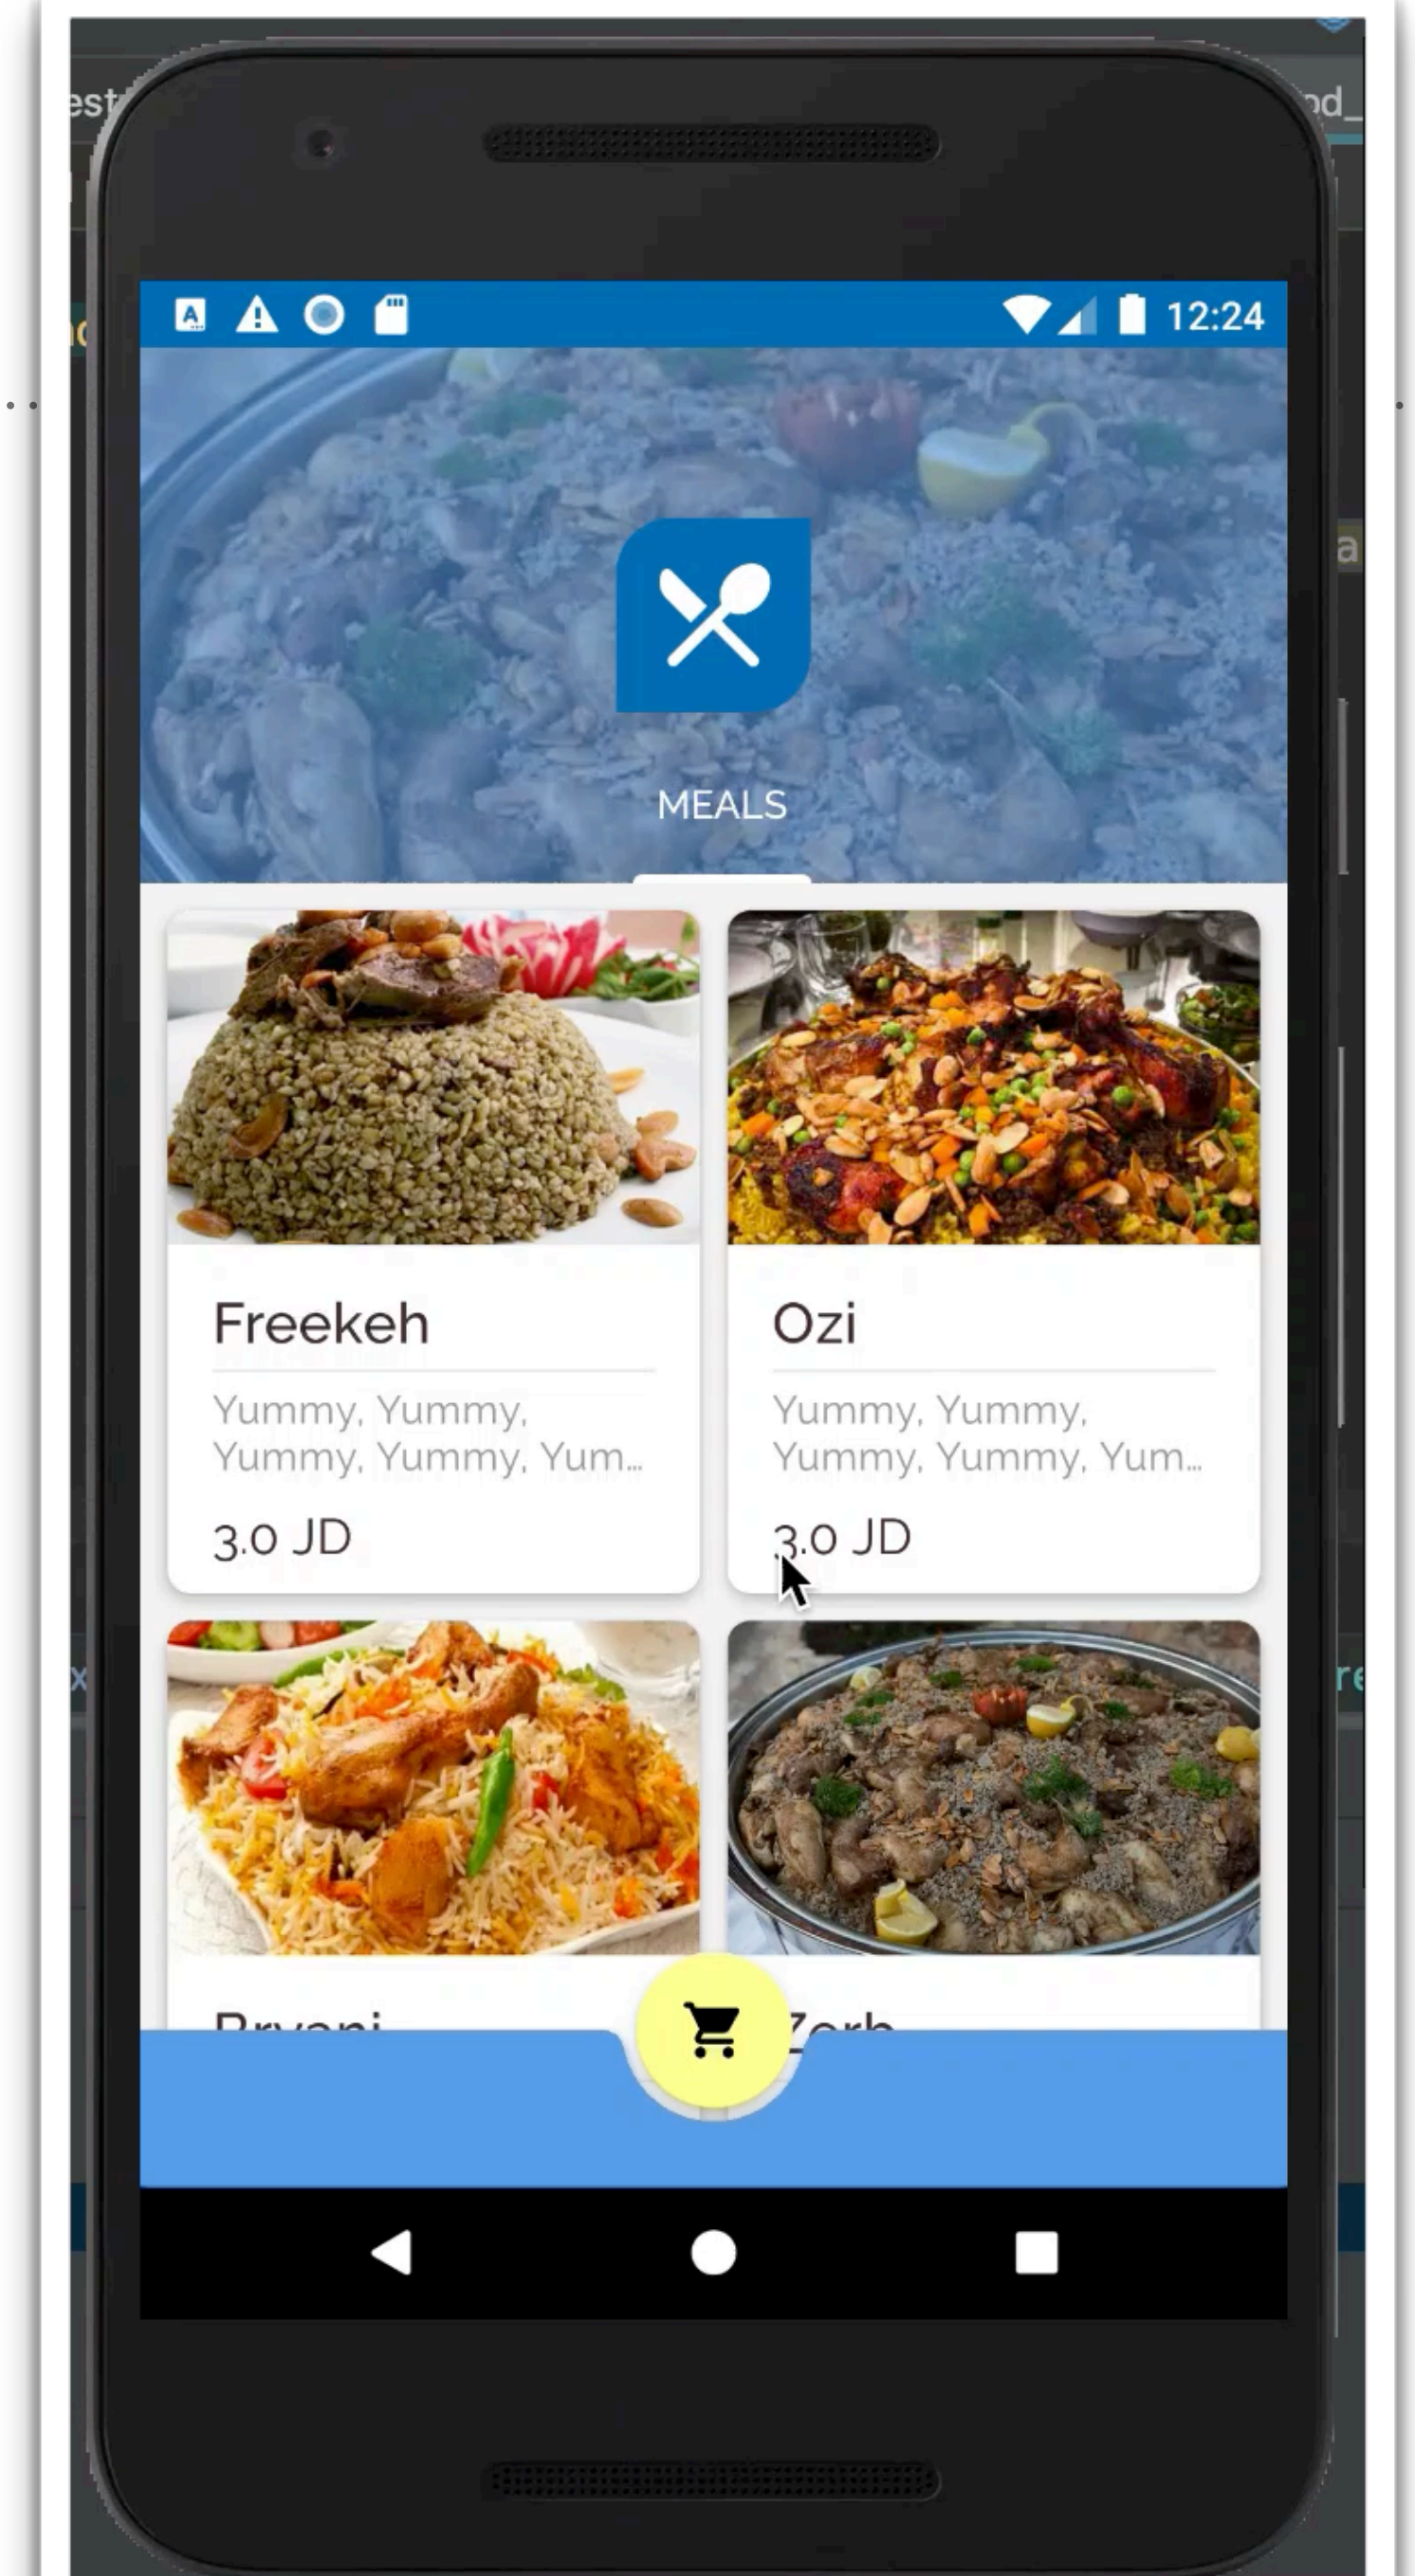

➤ Complete Order

# MVP – UI DECISION

---

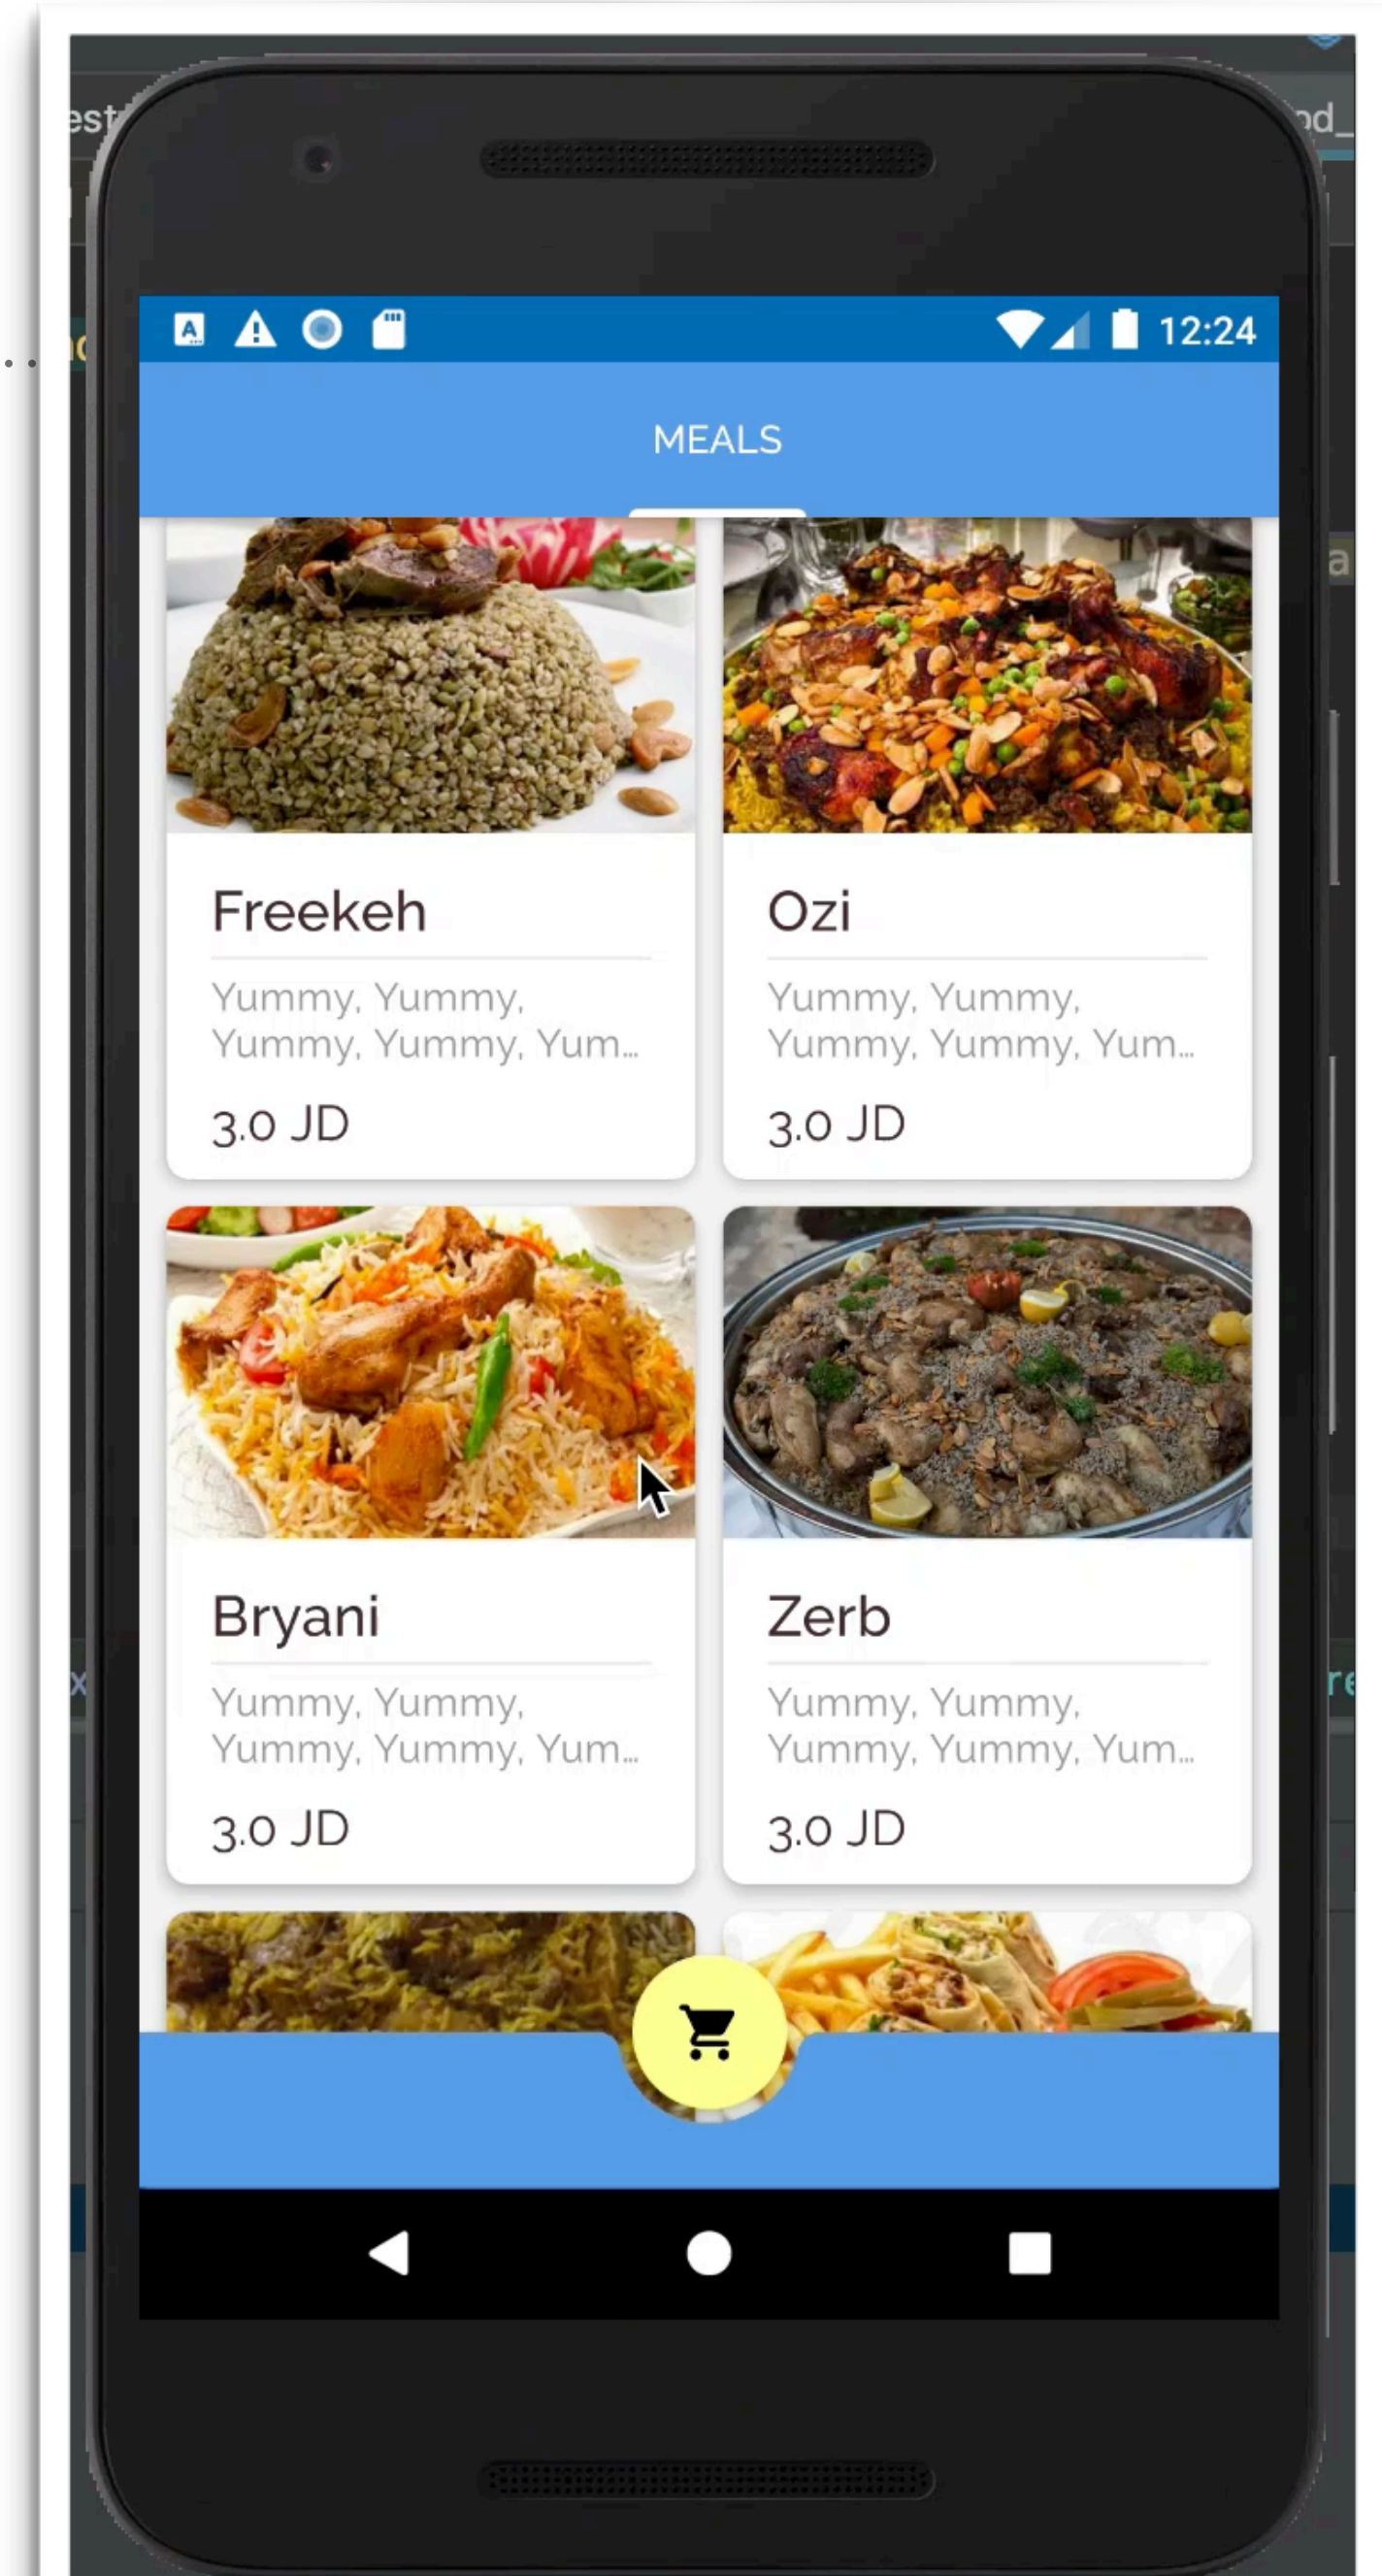

- Important decisions
- UI Was created Using Sketch App
- Focused on UX and make it as simple as possible
- Cards to view Food, not full with information
- Use Bright colors to attract attention
- Just Make it **BEAUTIFUL !**

# MVP – TECHNICAL

- Technical decision made
- MVP Implement using **Android Development**
- We Used **Android Studios** as IDE
- The App Must **Reflect Client Use cases**
- The app is **Working** and no lagging
- Focus on **USABILITY !**

# LESSON LEARNED

---

- what we did : Interviews>Use cases>Diagrams>Mock-ups>MVP
- Planning makes development Easier
- Always keep client updated, and negotiate
